

Econ 4545 final: Fall 2014

This is Part I of the final, the take-home part. Groups of one.

This part of the final counts for 10% of your course grade.

Make up and answer a question about mobile-source pollution. I would want a question where the answerer would need to apply some of the theory in class to a particular problem or issue wrt mobile-source pollution.

I will grade it as follows: 10 (great), 9 (almost great), 8 (good), 7 (fair), 6 (not good but something) and 3 (nothing)

I will choose the three best answers. I would determine the three best answers by Monday morning, December Sunday morning the 15th

Those ranked 2nd and 3rd would get an additional 20% added to their grade on this part of the final.

The individual ranked first would get their grade on this part of the final for their whole final. That is they would get an A on the final without having to take the second, in class, part of the final.

Note that your final counts for only 20% of your course grade, so not much.

This in class part would count for 10% of your course grade.

Remember this assignment has three parts: your question, your answer to your question, and an explanation of why this would be a good question for a quiz or exam on mobile-source pollution.

A goal of this assignment is to come up with some **new**, good questions.

Email me your assignment by **noon on Sunday the 14th** of December either as a **PDF** document or something that I can open in **WORD**.

Name the file “yourfirstandlastname”Final4545

For example, “EdwardMoreyFinal4545.docx”

In the **subject line** put

“Econ4545Final” **If you do not use these naming conventions I will not get it.**

Email me with any questions. Thanks.
